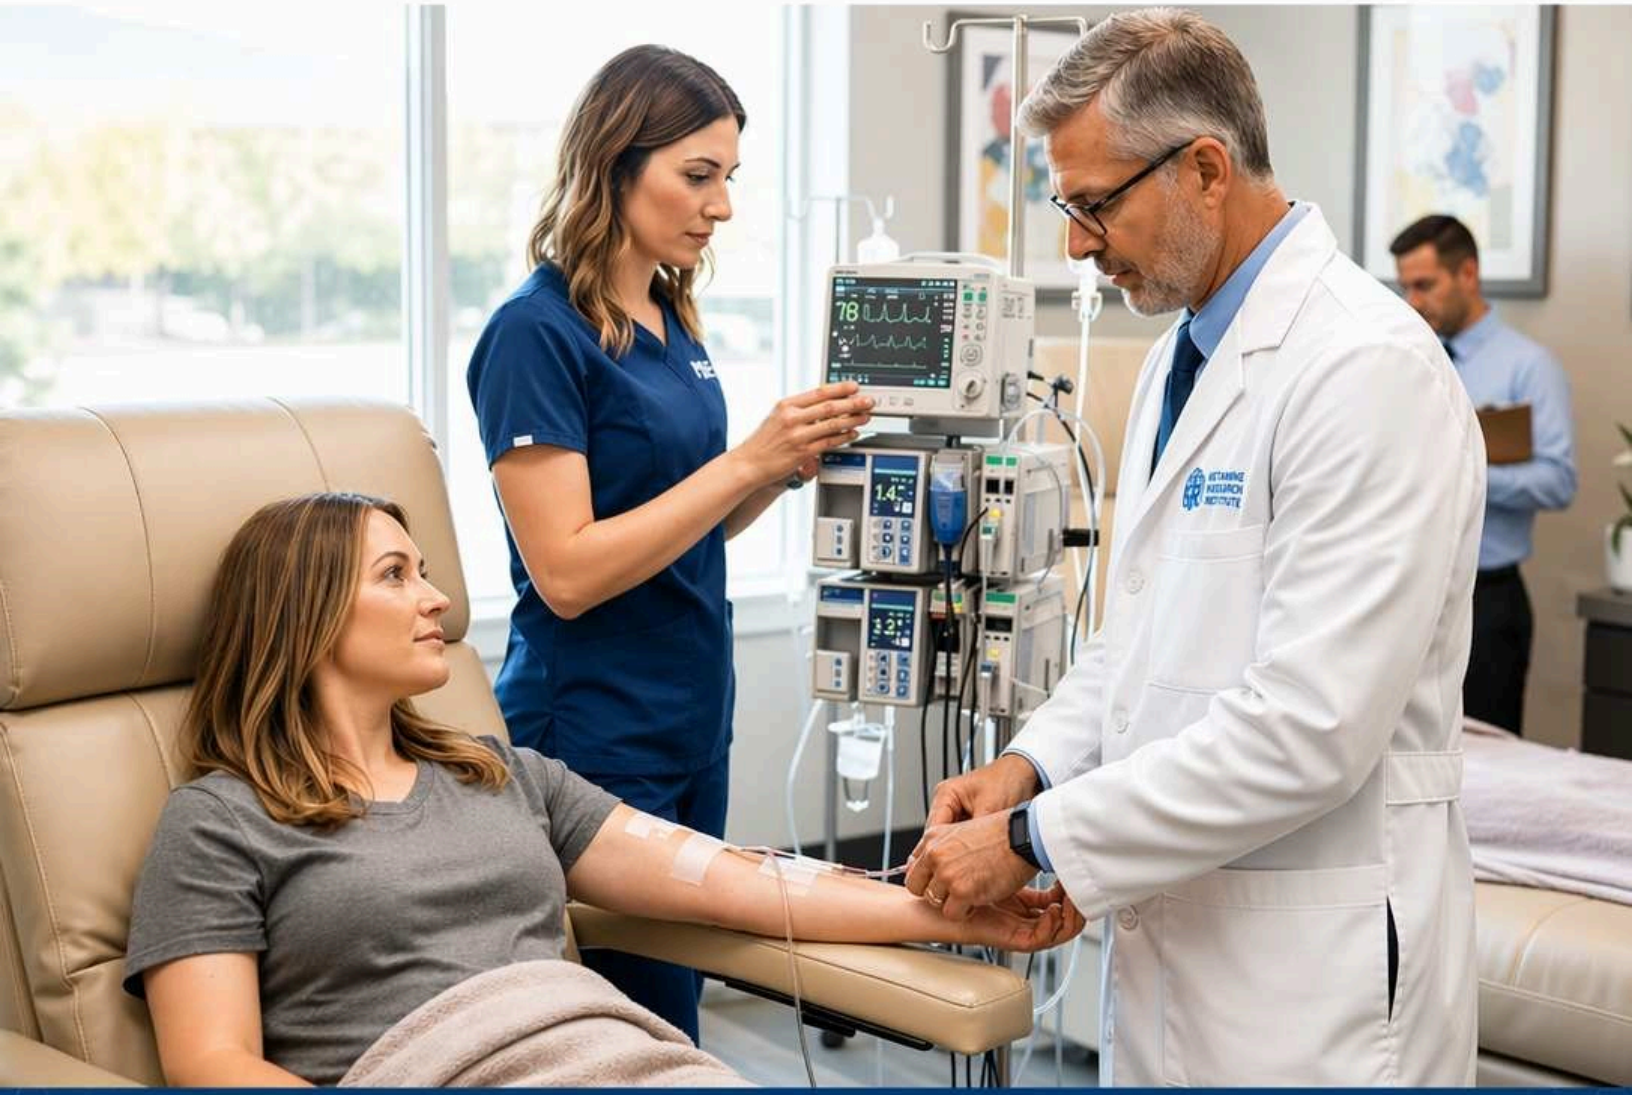
Evidence-Based Didactics | Supervised Clinical Infusions | Airway Training



"Mini-Fellowship" Intensive Ketamine Infusion Training Course for Clinicians

Course Description and Application

About Our Program

With more than thirty-five years of academic research and clinical practice in ketamine therapy, I have watched this field evolve from a narrow anesthetic application into one of the most consequential advances in modern medicine. The clinicians who enter this space today are not merely adopting a new procedure — they are stepping into a discipline that is still being written.

The Mini-Fellowship Intensive Ketamine Training Program was built for exactly that moment. This is not a certification course. It is a rigorous, immersive clinical formation designed to produce practitioners who can operate with precision, confidence, and ethical clarity in a rapidly evolving landscape — spanning foundational pharmacokinetics and plasma concentration targeting to advanced infusion protocols, patient selection, and the therapeutic frameworks that distinguish meaningful clinical outcomes from transactional procedures.

The Expanding Frontier: Ketamine is the leading edge of a broader psychedelic medicine renaissance reshaping psychiatry and pain management. Psilocybin, MDMA-assisted therapy, and ibogaine are advancing through clinical trials and regulatory review with remarkable speed. The pharmacological principles, patient screening methodologies, and outcome frameworks you develop in ketamine practice are directly transferable to this emerging class of therapeutics — and our curriculum addresses this landscape explicitly, preparing you for the clinical realities already forming on the horizon.

Right to Try Pathways: For patients who have exhausted conventional options, Right to Try frameworks represent a meaningful avenue for expanded access to investigational treatments. Our program addresses the legal and ethical architecture of these pathways, the documentation requirements that protect both patient and provider, and the clinical judgment required to navigate them responsibly.

REMS Strategies: REMS frameworks are already central to esketamine oversight, and the regulatory trajectory strongly suggests they will expand as additional compounds move toward approval. Our curriculum builds the operational fluency and practice infrastructure to meet these standards — so that as new therapies receive approval, you are positioned to lead rather than catch up.

What You Will Leave With Our maximum cohort of three to five participants ensures genuine individualized training — a structured clinical apprenticeship, not a lecture. You will leave with the technical competencies, pharmacokinetic framework, regulatory fluency, and clinical judgment to serve your patients well and adapt as this field continues to evolve.

I look forward to welcoming you.

Gerald W. Grass, MD

A Unique Opportunity

This intensive small group Ketamine Infusion Therapy Training Program is only offered several times per year, and class size is usually limited to only 3-5 participants. This ensures that each clinician will have first-hand experience and maximal opportunity to work directly with me on a one-to-one basis to facilitate the learning experience.

In addition, we assist our graduates along the way as they begin their practice, providing advice, consultation, recommendations and support as they begin to develop and implement ketamine infusion programs.

The Training Environment

All course training is conducted **"on-site"** and **"in-person"** in our infusion center. This format provides an opportunity to become familiar with the environment in which infusions are performed, as well as get first-hand experience administering ketamine utilizing all the necessary monitoring equipment, intravenous delivery systems, and supplies necessary for the safe and effective administration, storage, and handling of ketamine.

Course Benefits

Most importantly, our unique approach emphasizes several essential components of ketamine infusion therapy that are ***central to the KRI approach***, including:

1. A **Comprehensive Didactic** educational program that incorporates the latest research advanced in ketamine therapy and emerging psychedelics .
2. An innovative and more sophisticated **Precision-Medicine and Target-Controlled Infusion** approach to ketamine therapy
3. "Hands-on" **supervised clinical training** administering ketamine to real patients in a working infusion suite, under direct **physician supervision**.
4. The opportunity to personally **experience a ketamine infusion**.
5. Ongoing **personal mentoring** and **clinical support** as you begin your ketamine program
6. Additional educational materials and **inclusion in our referral network** of trained ketamine providers.

We believe these components are essential to acquire the knowledge, understanding, and skill necessary to become a highly skilled clinician in ketamine therapy. Together, they provide the best opportunity for developing superior clinical proficiency and expertise.

In Conclusion

Our program is exceptional in the depth of its ***didactic, clinical, and experiential training***, and it is built on the ***published clinical consensus guidance*** and current ***state requirements*** relating to ketamine therapy. We are committed to helping clinicians learn how to provide ketamine-based therapy safely and effectively.

REGISTRATION APPLICATION

In addition to the form below, please remember to submit a copy of your medical license and a brief statement of your experience with and intended use of ketamine therapy.

REGISTRANT INFORMATION

IMPORTANT. Please answer all the questions:

MEDICAL DEGREE:

❑ MD ❑ DO ❑ Other

SPECIALTY CERTIFICATION:

❑ Psychiatry
❑ Primary Care/Emergency Medicine
❑ Anesthesiology
❑ Other

PRACTICE LOCATION:

❑ Office based – Solo Practice
❑Office based – Group Practice
❑Government/Military
❑Academic/Hospital based

Return completed form and additional requested documentation

to:

Ketamine Research Institute
5969 Cattleridge Blvd. – Suite 104
Sarasota, FL 34232 or
Fax to 850-602-9013.

For additional information about ketamine and its role in mood disorders, please see our website at:

EMAIL		

Please Note: *In addition to the above application form, please submit* ***a copy of your current active medical/professional licensure*** *and a* ***brief explanation of your interest in and planned use of ketamine-based therapy****.*

COURSE FEES AND POLICY: The fee for the 3-Day "Mini-Fellowship" Intensive Training Course for Clinicians is $8950.00 — **Application to the course does not guarantee acceptance**. Once all the documentation has been received and reviewed, we will arrange a convenient time to discuss your application, answer any preliminary questions you may have, and provide you with additional details about the program to dertermine if it meets your needs and goals prior to acceptance.

Upon official acceptance, a $2,500.00 deposit will be required to secure your spot in the program. The remaining balance of $6,450.00 will be due 30 days prior to course start date. Should you need to cancel within 30 days or less of the course start date, you will receive a full refund of any fees paid, less your initial deposit of $2,500.00.

PAYMENT METHOD (PLEASE CHECK ONE)

☐ MASTERCARD ☐ VISA. ☐ AMERICAN EXPRESS
